	Competent medical educators	Competent medical educators realize these competence components by	
Educational action in medicine <sup>1</sup> <sup>1</sup> The necessary medical expertise is a precondition	are able to select appropriate subjects for instruction	<ul> <li>considering typical challenges and barriers for comprehension within their teaching domain and by targeting and tackling these with appropriate methods</li> <li>by boiling down the teaching content to what is necessary for understanding without simplifying unacceptably</li> <li>guiding students to adequately prioritize and apply the necessary knowledge and skills for health care in a target-oriented manner</li> </ul>	<ul> <li>selecting subjects with regard to relevance, frequency, urgency and exemplarity</li> <li>e.g. indicating contraindications</li> </ul>
	are able to design conducive teaching and learning processes with regard to methodological and educational issues	<ul> <li>highlighting the relevance of the subject-specific content with regard to the interdisciplinary context of medicine</li> <li>considering evidence from learning psychology and physiology</li> <li>analysing and creating learning processes adequately with regard to the surrounding conditions and by applying suitable methods and media</li> </ul>	<ul> <li>considering the age-group of students e.g. exam nerves or alcoholic intoxication during a party</li> <li>e.g. Guilbert's 5-points or SMART criteria for writing learning objectives</li> <li>Planning teaching by use of the Sandwich principle or the AVIVA model</li> <li>using social structures e.g. buzz groups or aquarium</li> </ul>
	<ul> <li>adequately assess and evaluate the learning progress of their students with regard to knowledge, skills and attitudes</li> </ul>	<ul> <li> using different assessment methods according to the situation</li> <li> aligning assessments with the curriculum by means of blueprints</li> </ul>	<ul> <li>selecting assessment methods by means of Miller's pyramid or Bloom's taxonomy e.g. OSCE for assessment of skills</li> <li>to draft outcome expectancies</li> </ul>
	challenge students with demands that meet their previous knowledge and skills	<ul> <li> considering the general as well as the specific learning outcomes of the curriculum</li> <li> not demanding competencies from the students that are actual part of residency or PGME curricula</li> </ul>	<ul> <li>e.g. not asking students to interpret a pacemaker ECG or letting students place a central line independently</li> <li>aligning the learning outcomes of one's own educational interventions with the defined outcomes of the curriculum</li> </ul>

Competence Field	Competence Component	Competence Field	Competence Component
	Competent medical educators	Competent medical educators realize these competence components by	
Learner Orientation	create an atmosphere conducive for learning	<ul> <li>appreciating students' contributions</li> <li>encouraging students to pose questions and express dissenting points of view</li> <li>showing evident interest regarding students' learning progress</li> <li>offering individual constructive feedback and highlighting individual room for improvement</li> </ul>	<ul> <li>using methods for collaboration e.g. SNAPPS</li> <li>interactive teaching methods, e.g. group work, learning circles</li> </ul>
	support students' learning process allowing for their individual potential and needs	<ul> <li>recognizing learning difficulties and supporting students in overcoming these</li> <li>facilitating self-reflection also with regard to personal and emotional issues</li> </ul>	<ul> <li>encouraging students to define goals, e.g. writing down goals during a clinical rotation</li> <li>suggesting students to critically reflect learning achievements, e.g. letting students write reflection reports</li> </ul>
	activate already existing prior knowledge	<ul> <li>respecting students' prior knowledge and motivation against the interdisciplinary context when planning and implementing different educational interventions</li> </ul>	<ul> <li>Advance Organizer</li> <li>using methods to activate prior knowledge, e.g. quizzes, brainstorming, PBL</li> </ul>
Social and communicative competencies	<ul> <li>are able to communicate audience-related, situation- specific and goal-oriented</li> </ul>	<ul> <li> communicating goal- and goal-oriented</li> <li> being prepared and willing to recognize and constructively deal with difficult situations and conflicts</li> <li> considering aspects of gender, diversity and (inter-)cultural issues</li> </ul>	<ul> <li>dealing with typical interferences when teaching</li> <li>applying models for conflict resolution, e.g. TCI, CALM</li> <li>simulating intercultural physician patient contacts</li> </ul>
	<ul> <li>establish a working climate conducive for learning and cooperation</li> </ul>	<ul> <li>being respectful with students, patients and colleagues</li> <li>being attentive for issues of group dynamics when teaching and reacting adequately on it</li> <li>fostering a conducive feedback culture and being able to give and receive constructive feedback</li> </ul>	<ul> <li>mutual coaching</li> <li>360°-Feedback</li> <li>mutual teaching visits</li> <li>educational counselling</li> </ul>
	<ul> <li>are able to communicate educational and methodological aspects of learning and teaching processes</li> </ul>	<ul> <li>transparently, intelligibly and clearly communicating expectations, (learning) goals and assignments</li> <li>mastering didactical and rhetorical means for communication</li> <li>identifying opportunities for beneficial learning experiences and capitalizing these (teachable moments)</li> </ul>	<ul> <li>questions to foster deep learning</li> <li>stimulating interest, illustrating relevance</li> <li>learning contract</li> <li>constructive feedback</li> </ul>

	Competent medical educators	Competent medical educators realize these competence components by	
Role modeling and Professionalism	<ul> <li>consider the congruence of educational objectives and their own professional conduct</li> </ul>	<ul> <li>considering the physician's role and image as well as expectancies towards physicians and reflecting these aspects against the background of their own attitudes and behaviour</li> <li>considering ethical and legal norms and values and making these transparent whenever necessary</li> <li>considering the double role of physician and teacher when interacting with patients and students especially during clinical teaching</li> </ul>	<ul> <li>considering ethical principles when teaching, e.g. using non-judgmental language</li> <li>sympathetically respecting patients' dignity, e.g. no stigmatization of patients</li> <li>highlighting decision structures and conflicts, e.g. transparently using meta-communication</li> </ul>
	convey the necessity for reflecting one's own attitudes and behaviour against the background of professional demands and expectations	<ul> <li>encouraging students to consider their own professional self-concept</li> <li>strengthening students' personal responsibility for the learning progress</li> <li>(-&gt; Learner Orientation)</li> <li>adequately addressing unprofessional behaviour of students in class</li> <li>responsibly initiating appropriate actions to point out possible</li> <li>competence deficit to students and prompt them to initiate respective</li> <li>changes</li> </ul>	<ul> <li>considering rules for hygiene, e.g. hand disinfection</li> <li>addressing inappropriate clothing of students e.g. flip-flops on the ward</li> <li>adequately assessing students' test performance e.g. letting students fail if appropriate</li> <li>supporting students, e.g. mentoring, feedback</li> </ul>
	<ul> <li>are prepared to critically self- reflect and for lifelong learning</li> </ul>	<ul> <li>analysing the strength and weaknesses to generate goals for their continuing professional development</li> <li>dealing openly with failures and using them for further development</li> </ul>	<ul> <li>mutual coaching</li> <li>participating in training opportunities</li> <li>teaching portfolio</li> <li>critical incident method</li> </ul>
Reflection and advancement of personal teaching practice	reflect their own teaching practice	<ul> <li> using different forms of self-reflection</li> <li> using different forms of evaluation</li> <li> using scientific concepts and evidence</li> <li> aspiring to identify and accept own failures and searching for constructive solutions</li> </ul>	<ul> <li>Reflective Writing</li> <li>360° Feedback</li> <li>evaluation of students</li> <li>appraisal interviews</li> <li>reading up-to-date medical education literature</li> </ul>

Competence Field	Competence Component Competent medical educators	Competence Field Competent medical educators realize these competence components by	Competence Component
	continuously develop their own teaching practice	<ul> <li>using opportunities for further training in medical education</li> <li>defining goals for the development of their teaching competencies and verifying their accomplishments</li> <li>experimenting with different learning methods and materials</li> </ul>	<ul> <li>CPD, e.g. participating in national and international trainings / workshops</li> <li>appraisal interviews</li> <li>considering the requirements / learning outcomes of certified programs for medical education</li> <li>broaden their variety of methods</li> </ul>
Systems related teaching and learning	utilize and create institutional conditions conducive for learning and teaching	<ul> <li>aligning the planned and assessed curriculum with their teaching content (constructive alignment)</li> <li>utilizing proprietary resources to improve conditions for learning and teaching</li> </ul>	<ul> <li>blueprinting outcomes, learning content and methods, assessment formats and tasks</li> <li>utilizing the national catalogue for learning in medicine or similar documents</li> <li>organizing rooms that students can use for self- study</li> <li>computer labs for students</li> <li>providing learning materials online (learning platform)</li> <li>publish existing resources, e.g. simulation labs, training labs, learning platforms</li> </ul>
	consider the legal conditions for medical education	<ul> <li>knowing the relevant acts and regulations</li> <li>implementing the demands and requirements of these documents in their practice</li> </ul>	<ul> <li>constitution, medical licensure act, local study and assessment regulations</li> <li>clarifying issues of liability e.g. when medical students act independently</li> <li>informing students about their rights and duties at the beginning of clerkships</li> </ul>

Competence Field	Competence Component	Competence Field	Competence Component
	Competent medical educators	Competent medical educators realize these competence components by	
	consider the structures and processes within their institution	<ul> <li>knowing the structures and responsibilities in their institution that are relevant for teaching</li> <li>considering the processes within their institution</li> </ul>	<ul> <li>identifying the paths of information necessary for the coordination with the office of student affairs, program directors, etc. e.g. knowing the program director in a certain area</li> </ul>
	participate in the development of their school, faculty	<ul> <li>participating in the strategic development of the curriculum and contributing to the design of the local learning environment</li> <li>being willing to support and contribute to curricular innovations</li> <li>supporting and fostering the evaluation of teaching</li> </ul>	<ul> <li>contributing to symposia, e.g. Teaching Day</li> <li>Dealing transparently with the results of the evaluation, e.g. publishing them for students</li> </ul>
	<ul> <li>include societal and political developments when planning their teaching</li> </ul>	<ul> <li>including foreseeable demographic developments</li> <li>considering aspects that are related to the health care system and the delivery of care</li> <li>considering developments in professional policy</li> </ul>	<ul> <li>selecting cases specifically e.g. primary care for the elderly, inter-professional care</li> </ul>
	communicate with others to realize new aspects in teaching or to hand on their expertise to others	<ul> <li>actively seeking exchange with individuals outside of their institution</li> <li>handing on their experience and insights from their teaching projects</li> <li>being willing to cooperate beyond their department and school or faculty</li> </ul>	<ul> <li>using platforms for scientific exchange, e.g. publishing teaching projects, presenting posters</li> <li>actively exchanging with other teachers e.g. by sharing teaching materials</li> <li>retrieving expertise from other sections of the university e.g. consultation for e-learning</li> <li>contributing to committees of the national organization for medical education.</li> </ul>
