Total Results from Forward and Backward Reference Searches			1	11

*Forward searching refers to list of publications that have referenced the citation since its publication. Backward searching refers to the references included in the citation's bibliography. Various databases can be used to execute forward citation searches including Scopus, Google Scholar, or PubMed Central. The number of forward citations identified per reference will vary by database, so it is important to specify the source used. Backward citation searching can be completed by analyzing an article's reference list or by using a database such as Scopus. [This guide from University of Wisconsin Libraries provides further explanation on forward and backward searching.](#)

Additional Notes

1.	Indicate process for removing duplicates.	Results were de-duplicated using RefWorks.
2.	List filters or limits applied.	Language = English Publication Date: from start of database to present
3.	Was this search based on a previous search such as one published in a prior review? (If yes, provide citation or source.)	No.
4.	Was this search peer-reviewed? If so, by whom and what are their qualifications and area of expertise?	No.
